

Chapter 6 : Q. 29 - Page 192

Query : Sir, a similar question is solved by ICAI using LPP approach in new module (Nov. 2021 edition) on page 5.29 - Illustration 9.

But we didn't use LPP approach. What we should do in the exam?

Reply :

In ICAI module there are two questions :

- (i) Find optimum product mix and
- (ii) the company decided to produce only one of the two products

But in our classroom notes, there is only second part of the question. Please see the difference very carefully.

As at this stage in our classroom discussion, we have not discussed LPP model, I have solved only second part of the question, because it doesn't require LPP model. You can compare only part (ii) answer of ICAI with our answer.

We have discussed LPP model on page 225 and onwards in our classroom notes (Ver. 4) and we have solved such type of questions there with multiple key factors. You can solve part (i) of the question only after studying LPP model using Graphical Method.
